

## CARBODUR Mn

International standards	ional standarda DIN 9555					
International standards	DIN 8555 AWS A56.13	E 7-UM-250-KP E FeMn-A				
	AVIS AD0.13					
Approvals						
Characteristics	Basic coated, AC-weldable electrode with approximately 120 % recovery. Due to the weld metal's high tenacity and hardness, CARBODUR Mn is suitable for hardfacing on parts which are subject to extreme impact stress and cavitation. A considerable increase in wear resistance through strain hardening can be achieved by cold-hammering.					
Operating temperature						
Typical applications	Excavator teeth, crushing hammers, rings in rotary furnaces, rail switch cores, rails, rollers, etc.					
Machanical properties	Hardness					
Mechanical properties of all-weld metal	as welded HB	Hardness Strain-hardened HRC				
	as welded	Strain-hardened				
of all-weld metal	as welded HB	Strain-hardened HRC				
of all-weld metal (typical values) Weld metal analysis	as welded HB approx. 250 C Mn	Strain-hardened HRC approx. 54				
of all-weld metal (typical values) Weld metal analysis ( typical, wt. % )	as welded HBapprox. 250CMn0,814	Strain-hardened HRC approx. 54 Ni 3				
of all-weld metal (typical values) Weld metal analysis ( typical, wt. % ) Current	as welded HB   approx. 250   C Mn   0,8 14   = + / ~ 65 V	Strain-hardened HRC approx. 54				
of all-weld metal (typical values) Weld metal analysis ( typical, wt. % ) Current Welding positions	as welded HB   approx. 250   C Mn   0,8 14   = + / ~ 65 V   PA, PB, PC, PD, PI	Strain-hardened HRC approx. 54				

Dia./Length	Amperage (A)	Pcs./ packet	Pcs./ carton	kg / 1000	kg / packet	kg / carton
