	DIN 8555	E 20-UM-55-CTZ

Approvals ---

Characteristics CARBO S 1 is an AC-weldable hardfacing electrode with an alloyed core and a recovery of 160%. The deposit is a cobalt base alloy of austenitic-ledgeburitic structure with embedded CrW carbides. It is the hardest of the standard Cobalt base alloys.
The weld metal is highly resistant to corrosion, impact, abrasive wear as well as thermal shocks and heavy mechanical impact.
The deposits are only machinable by grinding

Welding instructions Working temperature should be kept between 400° and 600°C, depending on base material and type of construction. Slow cooling, if necessary oven cooling, is recommended for low alloyed and austenitic steels. Subsequent heat treatment (stress relief at 700°C approx.) is not necessary, except on large structures.

Operating temperature From room temperature up to + 1000° C

Typical applications Wear pads, rotary seal rings, pump sleeves, centre less grinder work rests

Mechanical properties of all-weld metal (typical values)	At Rt. HRc	+ 600°C HRc	+ 800°C HRc	Melting-range °C	Density g/cm³
	ca. 55	ca.44	ca. 34	1250-1290	8,7

Weld metal analysis (typical, wt. %)	C	Si	Mn	Cr	W	Fe	Co	Others
	2,2	1,2	1	30	12,5	3	Base	< 3

Current = + / ~ 42 V

Welding positions PA, PB, PC

Rebaking 1 h, 350 +/- 10 °C (if required)

Flux-cored wire equivalent CARBO F- S 1

Dia./Length	Amperage (A)	Pcs./packet	Pcs./carton	kg/1000	kg/packet	kg/carton
